

Why Oxalic Acid is very important to your health

Oxalic Acid a normal element in blood has been reported to have a mean value of 288mcg of anhydrous oxalic acid/ 100ml of blood. “**Oxalic Acid in Biology and Medicine**” written by A. Hodgkinson 1977. **Oxalic Acid**, is a strong poison (only consume **Oxalic Acid** from a natural food source) and is a normal element in human blood and must be available for **the immune system** to fight the diseases of **cancer, viral, bacterial and vascular conditions**. When oxalic acid falls below an effective level the immune system can no longer protect the body from various diseases. When the immune system can no longer **eliminate abnormal cells, radical cells** are allowed to develop and **give rise to a detectable tumor**. If you have **cancer and** have had or are currently receiving radiation **and/or** have become **infected with a virus**, you are in **serious trouble** and **you should consider eating a diet to elevate the Oxalic Acid levels in your blood and stop blocking Oxalic Acid**.

Oxalic Acid, is a natural chemotherapy **void of** devastating **side effects**. It performs better than man-made pharmaceuticals currently used in medicine. In reality, **Oxalic Acid** is God's Natural Chemotherapy. “The **Merck Laboratories, Manual of Diagnosis and Therapy**” fails to list oxalic acid in the index! **Consequently**, most **doctors** and **dietitians** are unaware of oxalic acid as a **normal chemical in human blood** and/or how important it is to your immune system for the protection of your body from various diseases. **Since** you may be eating and drinking many items that are good sources of **oxalic acid** please **NOTE** that those sources **become worthless** when the **oxalic acid** is **blocked** and/or **decomposed** as follows:

The **first blocker** is **CITRIC ACID**: it is an **acid** we **do not need** to take **orally**; it is required **only if there** is an excess or an undesirable acid in our system, **and if** it is **needed the body will produce it**. One of the acids **CITRIC ACID will flush** from your **system** if it is **in excess** is **oxalic acid**; so if it is taken orally **it will reduce the level of oxalic acid in the blood whether its in excess or not**. **To make a point, Adelle Davis** a well known nutritionists in her book “**Let's Get Well**” published 1965 in her writings about kidney stones said, “Persons unfamiliar with these **acids** and **perhaps** confused by them **might think of oxalic acid** as the **villain** and **citric acid** as the **rescuing hero**”. **Considering my research** of two (2) **US Patents** which can be reviewed by clicking: [6133318](#) and [6133317](#), I believe **citric acid** is the **number 1 cause of cancer today**. Many people think only of citrus fruits when **citric acid** is mentioned, however, the **greatest source** is from **ingredients added to foods and beverages**. **Citric acid** is a **cheap** preservative, a great **taste enhancer** and **keeps colors bright**. And we have the **FDA** worried about **regulating nicotine???**

The **second blocker** is **CALCIUM** primarily the calcium in cow milk; and that means **all products made from milk must be avoided; except butter which contains little calcium**. Dietary **oxalate** is **appreciably increased** when **calcium intake** is reduced. And I argue that **except for taste, cow milk was not meant for humans**. When a calf is weaned it seldom returns to the cow. Where do you think the calf gets its calcium? Calcium, other than that which is obtained from the **natural food sources** should be avoided. **Energy Plus-GR** and **almonds** are good sources of natural calcium.

Persons fighting a disease should avoid tap water unless the water system is on a softener or filter that **removes all the calcium**. **It is recommended that distilled water be used**. A person unfortunate in having osteoporosis and cancer taking a prescribed calcium supplement should take the supplement in the morning with breakfast and avoid any oxalic acid intake for at least 4 hours to **avoid conflict between calcium and oxalic acid**.

The **third blocker** is an **environmental item in today's lifestyle** that has to be considered and I believe **it is the primary cause of breast and lung cancer in women, smokers or not**. It is **ELECTRIC MAGNETIC FIELDS (EMFs)**. **Lab test** have proven that the **Groups of mice** that received **only radiation** had **more lung cancers** than any **other Groups**.

The real effects of ***Electro Magnetic Fields and Radiation*** are finally becoming public information, and why they CAUSE cancer and many other health problems is the fact that ***Electro Magnetic Fields and Radiation*** decomposes ***the natural Oxalic acid*** produced by your body.

Women must absolutely **avoid use of the microwave** and in **most cases be at least 20+ feet from most large units**. **Men** should follow the same rule if they are **fighting cancer**. To cite an analogy, microwave ovens are usually placed on a counter top, under a cabinet or in a stack on top of an oven; for most women this is breast high and women happen to be the prime user, especially working women. Women rush home pop a frozen dinner in the microwave, set the timer for 2 min. stand right there and wait for the bell. Besides **decomposing the oxalic acid** in the frozen dinner, oxalic acid in the human blood vessels is also being decomposed. Now, you also know the **answer to the question about cell phones**. The majority of cell phones can be a cause of brain tumors as the magnetic field from the antennae is very strong. Electric blankets unless they are shielded do decompose acid in the blood contributing to cancers. And do not use a juicer to make carrot juice or any other juice; at the point of juicing the magnetic field is almost as strong as the microwave. Also electric razors at the point they touch the skin are also very strong.

What is strong? Any magnetic force greater than that which will influence a magnetic compass will begin to decompose oxalic acid. The Department of Energy suggests when there is any force greater than 2.0 mille Gauss you should take precautionary measures. **When humans and animals are exposed to electric magnetic fields stronger than those existing since creation; decomposition of Oxalic Acid begins.** The amount of decomposition is relative to the strength of the field and time of exposure. Since **Oxalic Acid** is the "magic bullet" that protects the body from disease, EMF(s) not only cause cancer, they can be the cause for all "major diseases" such as Arthritis (all types), Alzheimer's, MD, MS, ALS, and the like. For MORE information about the effects of ***Electro Magnetic Fields*** click: [EMF](#)

For scientific information about the fact that smoking does not cause cancer and how the lack of Oxalic Acid affects you health click: [SMOKING](#) and [SMOKING2](#) and [SMOKING3](#)

[20/20 Investigates Cell Phones](#) or [WIFI Warning Signs](#) or [Larry King Investigates Cell Phones](#)

The **fourth blocker** is alcohol. It washes oxalic acid from the blood and is excreted with urine. The same process is used in laboratory testing. Toxic elements are removed from test materials by being washed with ethanol, an organic alcohol. If you must have alcohol or wish to celebrate a special occasion, **drink cheap red wine**. Oxalic acid is **fairly high in the concord grapes** and probably binds with the alcohol in the wine.

The **fifth blocker** is pyridoxine (vitamin B6). Oxalic acid will be flushed from the kidneys when **Pyridoxine** is increased in the diet. Today few people pay attention to the RDA for any of the nutrients and for pyridoxine the RDA amount varies from 2 to 4mg depending on what reference you are reading. **Like everything else B6 is added to most foods**. Some cereals looking out for your health may provide as much as 2500% of your needs. As with all nutrients you should take your vitamins from a natural source. To **avoid B6** you must avoid red meat **especially pork** and very surprising to me and everyone else you **must avoid the white meat of the fowl**, chicken and turkey, because the white meat is very high in pyridoxine. Many diets advise that you avoid meat because of the fat content and advise you to eat the skinless breast of chicken. The white meat of the chicken and turkey is higher in pyridoxine than lean beef. You can eat lamb and the dark meat of the fowl as well as any seafood. Canned tuna is especially good; it is high in protein.

The **sixth blocker** is **sulfuric acid** and specifically **Albuterol Sulfate Inhalation Solution** with any form of sulfuric acid is bad for your health

It is amazing, with half a million or more references to oxalic and sulfuric acid on Google, not one word is said about sulfates /sulfuric acid being a water causing combination that may lead to cancer and/or death by suffocation.

If the sulfate in **Albuterol** is [sulfuric acid](#) or any form of **sulfuric acid**, it is a water causing agent when it comes in contact with oxalic acid. Chemical action of creating water by adding **Sulfuric acid** to oxalic acid is found on **pages 158 & 159 of Elements of Chemistry**, 3rd addition, 1937, written by [William Foster](#).

Sulfuric acid creates water by the **extraction** of hydrogen and oxygen from the normal oxalic acid in blood and lowering the levels of oxalic acid in the blood thereby allows radical cells to develop.

This unfavorable and detrimental chemical action of creating water was never discovered during the **development** and **test** program of **Albuterol** because of a **faulty test protocol approved** by the [Food and Drug Administration](#).

Approved test protocol: Animals **ARE subjected** to radiation PRIOR to TESTING in-order to destroy the immune system of the animal and then review the test results to document any harmful or beneficial effects that the drug may have on the animal. Radiation decomposed and destroyed the oxalic acid in the animal's blood and therefore no water was created because there was no oxalic acid in the blood of the animal.

Oxalic Acid is a normal element in blood and has been reported to have a mean value of **288mcg of anhydrous oxalic acid/ 100ml of blood, page 85, "Oxalic Acid in Biology and Medicine"** written by [A. Hodgkinson](#) 1977. When oxalic acid falls below an effective level the immune system can no longer protect the body from various diseases. When the immune system can no longer **eliminate abnormal** cells, **radical cells** are allowed to develop and **give rise to a detectable tumor**.

For more information about Oxalic acid or oxalate composition and method of treatment review Claims listed under US Patent # 6133317 by clicking: [6133317](#)

US Patent # 6133318 has more information about Oxalic acid or oxalate compositions and methods for bacterial, viral, and other diseases or conditions and can be reviewed by clicking: [6133318](#)

Oxalic Acid is a strong poison and you should only consume **Oxalic Acid** from a natural food source and research indicates the following as a diet for the treatment of infectious disease, cancer or the reduction of tumors (**always remember:** too much of anything is bad for you):

Hollywood carrot juice, Dark unsweetened cocoa, Welch's Concord Grape juice, carrots, spinach, parsley, chives, beets and beet leaves, garlic, collards and radishes are among vegetables containing oxalic acid or oxalate and should be eaten or drank in order to build a high concentration of oxalic acid in the body fluids. To increase oxalic acid absorption consume: Almonds, cashews, peanuts, and, especially walnuts which are high in oleic and linoleic fatty acids.
